

GLOBAL SUPERSTORE SALES ANALYSIS DASHBOARD

Project 1 Report

Prepared By: Pranjal Vaishnav

Internship Organization: Elevate Labs

Internship Domain: Data Analytics Internship

Tool: Microsoft Power BI Desktop

1. Introduction

This project was completed as part of my **Data Analytics Internship at Elevate Labs**. The objective was to transform the Global Superstore dataset into an interactive Power BI dashboard that provides meaningful business insights. The dashboard helps users analyse sales performance, profitability, customer behaviour, product performance and regional trends through interactive visualisations.

2. Abstract

The project follows a complete Business Intelligence workflow. First, the dataset was imported into Power BI. Using Power Query, the data was cleaned by checking data types, removing unnecessary columns and preparing the dataset for analysis. DAX measures were then created to calculate business KPIs. Finally, an interactive dashboard was designed to help users explore the data efficiently through filters, charts and KPI cards.

3. Tools & Technologies Used

- Microsoft Power BI Desktop
- Power Query (Data Cleaning & Transformation)
- DAX (Data Analysis Expressions)
- Global Superstore Dataset

4. Steps Involved in Building the Project

Step 1: Imported the Global Superstore dataset into Power BI Desktop.

Step 2: Cleaned and transformed the dataset using Power Query by removing unnecessary columns, correcting data types and preparing clean data for reporting.

Step 3: Created DAX measures such as Total Sales, Total Profit, Total Orders, Total Customers, Units Sold and Profit Margin.

Step 4: Designed an interactive dashboard using KPI Cards, Line Chart, Bar Charts, Donut Chart, Map Visual, Slicers and Top Products analysis.

Step 5: Added Reset Filters, Executive Summary page and navigation buttons to improve usability and user experience.

Step 6: Tested all filters, cross-filtering and dashboard interactions to ensure correct results.

5. Dashboard Features

- KPI Cards displaying important business metrics.
- Sales Trend Analysis.
- Sales by Category and Region.
- Sales by Country Map.
- Top 10 Products Analysis.
- Customer Segment Analysis.
- Interactive Slicers (Year, Category, Segment and Region).
- Reset Filters Button.
- Executive Summary Page.

6. Conclusion

This project, completed during my **Data Analytics Internship at Elevate Labs**, enhanced my practical skills in Power BI, Power Query, DAX, dashboard development and data storytelling. It strengthened my understanding of analysing business data and presenting insights through interactive dashboards that support informed decision-making.

Internship: Elevate Labs | **Project:** Project 1 - Global Superstore Sales Analysis Dashboard
